To whom it may concern,

Ernest Ziesman of Skydrone UAVS has provided consulting and pilot services to SNC-Lavalin for UAV inspection flights on Altalink 500 KV and 240 KV Power Transmission Lines and substation's for inspection of structures and aerial marker cones.

UAV flight services were provided of approximately 15 hours flight time in a non-energized environment and an additional 20 hours in an energized environment, providing high definition photographs and videos.

This resulted in substantial reductions in cost over traditional helicopter inspection coupled with an increase in safety.

Regards,

Steve Sharron, B.Sc., CAPM, ALS Associate
Senior Technical Advisor (Geomatics)
Engineering
